## ARPU

Churn rate
= Earnings Before Interest, Taxes, Depreciation \& Amortization; ttm = trailing twelve months
= Operating cash flows less net capital expenditures
= Purchase of property, plant \& equipment (PPE), plus investments in intangible assets, less proceeds from the sale of PPE
= Average revenue per line
Average revenue per user
= Minutes of use
= Not available
$=$ Not meaningful
$=$ Inactive subscribers are those whose lines have been physically disconnected (except for a subscriber in the first three months of collection proceedings).
$=$ Not including revenues from data communications and transmissions services, internet services, services to communications providers, and contract and other services. Based on average subscribers for the period.
$=$ The number of telephony subscribers who left during the period, divided by the average number of registered subscribers in the period.
$=$ Total revenue from Internet services excluding revenue from business directory services, divided by average internet subscribers.
= Subscriber data excludes inactive subscribers connected to Pelephone's services for six months or more. An inactive subscriber is one who in the past six months has not received or made at least one call or who has not paid for Pelephone's services.
= Average monthly revenue per subscriber is calculated by dividing the monthly average of revenue from cellular services (airtime, usage fees, call completion fees, roaming services, value added services and sundry), repair services and warranty in the period, by the average number of active subscribers in the same period. In light of the decrease in mobile termination rates as of 1.1.11, Q1-Q4 2010 ARPU data is presented based on reduced termination rates in order to compare to 2011.
= Average monthly use per subscriber (in minutes) is calculated according to a monthly average of total outgoing and incoming minutes in the period, divided by the average total number of active subscribers in the same period.
$=$ Churn rate is calculated according to the proportion of subscribers who have disconnected from the Company's services and subscribers who have become inactive during the period, out of the average number of active subscribers during the same period.
= Based on interconnect fees in effect during each period.
= One household or small business customer - for a business customer with numerous intake points or decoders (such as a hotel, kibbutz or gym), the number of subscribers is calculated by dividing the total payment received from the business customer by the average revenue from a small business customer.
= Includes total yes revenues (content and equipment, premium channels, technical services, advanced services, one-time sales of content, revenue from channels, internet and others) divided by average subscribers for the period.
$=$ Number of yes subscribers who left yes during the period, divided by the average number of yes registered subscribers in the period.
